Test Comments: *This location started off good with excellent emergence and was really uniform at V3-V4 growth stage. Good rainfall for most of the season, but there were periods when it received heavy amounts. This farm is patterned tilled, which drained any excess water from within the plot area. Stalk quality on several of the hybrids was starting to deteriorate quickly, with some anthracnose present.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
