**Yield & Income Factors:** Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.030 Prices: GMO = \$3.20; non-GMO = \$3.20

**Test Comments:** From a uniformity standpoint, this location stood out all year. Planting conditions were ideal. Corn seedlings emerged almost perfectly. The early part of the growing season was very conducive for corn growth. Pollination went well. Most ears filled out nearly to the tip. Any lodging that was noted, was due to stalk lodging. There was evidence that stalk rot was starting to affect some hybrids.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
