**Test Comments:** *Excellent stands and emergence at this plot. Growing conditions were close to ideal for corn. During the early stages of ear development, there was very little stress on the corn, because there were a lot of nice big ears. Most hybrids had kernels to the ear tip. Stalk quality was still pretty good at harvest. There were several hybrids with weak ear shanks. Overall, this was a nice uniform location.*

Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
