Averages = **205.8** **18.0** **1** **32.1** **640**

LSD (0.10) = 17.7 0.5 ns

LSD (0.25) = 12.3 0.3 ns

**Yield & Income Factors:** Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.030 Prices: GMO = \$3.20; non-GMO = \$3.20

**Test Comments:** This site has a lighter sandier type soil. Emergence was good and corn was off to a great start. The plot received some good rainfalls, but this soil type dries out really fast. Stalks were starting to become brittle for better than half of the varieties. Pollination went well, filling out ears all the way to the tip. Plants were relatively short compared to other locations, but seemed to be holding good ears.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
