Test Comments: *Corn emerged at this location, but it got off to a slow start. Herbicide and nitrogen were applied after corn emerged, causing some early stress. The growing season was good during July and Aug, but limited rainfall hurt top end yield. Some foxtail present at harvest, which impacted the plot most of the growing season. Diseases were minimal, stalk quality was still good, and ears were small.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
